

METHOD AND APPARATUS FOR PERFORMING REQUEST CONVERSION BETWEEN CARD PAYMENT ACQUIRING INSTITUTION AND DIGITAL WALLET AND COMPUTER SYSTEM

ABSTRACT

5 Embodiments of this specification disclose a method and an apparatus for performing request
conversion between a card payment acquiring institution and a digital wallet and a computer
system. The method is performed by a processing system and includes: first, a first request is
received from the card payment acquiring institution, where the first request is used to request an
authorization freeze of funds and includes a transaction ID of a to-be-paid transaction and a first
10 token; next, a first account in a first digital wallet corresponding to the first token is determined;
and then, a second request, including the transaction ID and the first account, is sent to the first
digital wallet.
