

ABSTRACT

A management system for a power storage device is one example of an embodiment of the present invention, and comprises: a power storage device having a communication module; at least one management device that is disposed in a predetermined management
5 area and that can communicate wirelessly with the power storage device; and a management server. At least one management device can detect that the power storage device has been taken out of the management area, and if it was detected that the power storage device was taken out, said management device outputs taking-out detection information.
