REPLACED

Lockers

5 The carcass for an array of lockers 1 is assembled from
separate side panels 2, top and bottom panels 3, a back
panel 4, and internal panels 5 and 6 which divide the
interior of the carcass into columns and rows. The
internal panels (Figs 5 & 6) have slits 21,25 which
10 enable them to fit together, and tangs 19,24 which pass
through slots 18,17 in the back panel (Fig 4) and are
then twisted to clench the panels together. The top,
bottom and side panels are secured in similar fashion.
The locker doors 28 (Fig 8) have moulded plastics hinge
15 sockets 38 by which they are snap-fitted to the carcass.
