(54) Title: CONTEXT MODELING FOR SIGN PREDICTION FOR VIDEO CODING

FIG. 10

(57) Abstract: A video coder may code a sign prediction syntax element that indicates whether a sign prediction hypothesis is correct for a transform coefficient. The video coder may code the sign prediction syntax element using a context-based coding process. The video coder may determine a context for coding the sign prediction syntax element based on a position of the transform coefficient in the block of video data. The context may be further based on a coding mode used to code the block.
