Claims

1. A non-aqueous percutaneous absorption composition comprising a basic medicament or a salt thereof, and sorbic acid and/or its metal salt wherein the basic medicament or the salt thereof is tizanidine or tizanidine hydrochloride, and the concentration of the sorbate component is 0.5-2.5 moles per mole of the basic medicament.

2. The percutaneous absorption composition according to claim 1, further comprising a basic component selected from the group consisting of an organic basic compound, an inorganic basic compound and a salt of a strong base.

3. The percutaneous absorption composition according to claim 2, wherein the concentration of the basic component is 0.4-3.0 moles per mole of the sorbate component.

4. A matrix type plaster comprising the percutaneous absorption composition according to any one of claims 1 to 3 dispersed in an adhesive layer.
