Abstract

INFORMATION PROCESSING DEVICE, MOVEMENT CONTROL
SYSTEM, INFORMATION PROCESSING METHOD, AND PROGRAM

10 Object

To suppress a reduction in the operating ratio of a mobile body.

Solving Means

15 An information processing device includes a movement destination
information acquisition unit configured to acquire movement destination
information indicating a position of a movement destination, a route setting
unit configured to set a route to the movement destination for a mobile body
based on the movement destination information, and an event acquisition unit
20 configured to acquire event information indicating that an event unexpected at
a time of setting the route has occurred for the mobile body moving along the
route. The route setting unit sets a next route of the mobile body based on the
event information.
