

ABSTRACT

The tiltable sail system comprises a sail (2) displaceable between a position of use and a tilted position, a base (1) that supports the sail (2), said base (1) being rotatable between the position of use and the tilted position; a support (3), which supports said base (1) in an articulated manner; and a plurality of actuating cylinders (4) that actuate the movement of said base (1) from the position of use to the tilted position, or vice versa. It allows providing a tiltable sail system, which can be placed in a position of use and in a tilted position, which allows varying the position of the sail in a simple and safe manner.
