

Abstract

Thiols, in particular natural thiols, are prepared by
bioconversion by putting a cysteine S-complex into contact
5 with a micro-organism which can be used in foods having an
enzymatic activity of the beta-C-S-lyase type.

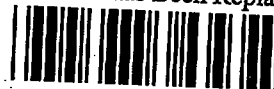

The micro-organisms used are preferably yeasts or
filamentous fungi.

10

The product obtained may be used in a foodstuff, as it is,
in a flavouring composition or as a flavour enhancer.
