500
502
Storing a plurality of mail units 200 in a plurality of storage units 110, each mail unit 200 including an identifier label 230 and one or more mail items addressed to a mailing address associated with the mail unit 200
504
Moving the transportation unit 300 within the mailbox assembly 100
506
Scanning, using the transportation unit 300, the identifier labels 230 of the mail units 200 in the storage units 110
508
Receiving, from the remote server 610, identification data of each mail unit 200, the identification data including the mailing addresses associated with the mail unit 200
510
Matching the scanned identifier labels 230 against the identification data to determine the mailing address associated with each mail unit 200 in the storage units 110
512
Identifying the mail unit 200 associated with the mailing address of the user collecting the mail items addressed to the user's mailing address
514
Transferring, using the transportation unit 300, the identified mail unit 200 from the corresponding storage unit 110 to the collection region 120 for collection by the user
