Comparison of FVIII Concentrates FVIII TMAE vs. FVIII TMAE-SEC
Storage in Infusionbags at RT; +/- Heparin
FVIII:C chromogenic

FVIII concentrates were reconstituted in Aqua ad inj. and Aqua ad inj. containing 5 IU Heparin/ml, respectively. After transfer into infusionbags samples were stored at roomtemperature. At timepoints indicated samples were drawn and examined for FVIII:C activity (chromogenic). FVIII recovery is expressed in percentage of initial activity.
