

Rulo Slices Puzzle - Patent Application - Abstract

Rulo Slices Puzzle is a recreational puzzle, consisting of a 3-dimensional ($n \times n \times n$) grid of colored cubes. These are initially arranged in ($n \times n$) sections within the grid by colour. The cubes can be moved by selecting a ($n \times n$) square group ("slice") of the cubes, and pushing the group, with cubes that leave the grid rejoining on the opposite side of the grid. The puzzle is shuffled through an initial series of random selections and moves. The aim of the puzzle is to then restore the puzzle to the original state.
