ABSTRACT

BINDING APPARATUS AND SYSTEM

One embodiment of the present disclosure provides a binding apparatus that comprises: a reinforcing bar binding unit configured to bind intersecting portions of at least two of a plurality of reinforcing bars; a travel unit configured to be able to travel on the plurality of reinforcing bars; and a travel control unit that controls travelling of the travel unit. The travel control unit controls the travelling of the travel unit on the basis of a map including a plurality of regions including estimated locations of the intersecting portions.
