

A B S T R A C T

SANITARY NAPKIN

A sanitary napkin (1) has a basic body (1A) comprising a liquid-permeable topsheet (2), a liquid-resistant backsheet (3), and a liquid-absorbent core (4) sandwiched between the sheets (2,3). There are provided adjacent transversely opposite side edges of the basic body (1A) a pair of elastically stretchable flaps (5) in the form of straps and rising from the backsheet (3), adhesives being applied on the top surface of said flaps (5) so that said flaps (5) may be adhesively fastened to the user's skin.
