(54) Title: AUTOCOMPLETE FEATURE FOR CODE EDITOR

(57) Abstract: A computer system operates, or is operable to maintain a data store that includes searchable information for a graphic design, where the searchable information including text-based information associated with one or more layers of a graphic design. In response to receiving one or more character entries, the computer system performs a matching operation to match the character sequence to a term and/or value of the text-based information for one or more layers of the collection. The computer system predicts or determines a matched code line entry based on the term, value or combination of term(s) and value(s). The computer system provides, for the code editor, the predicted or matched code line entry, so as to autocomplete a portion of a code line entry with the predicted or matched code line entry.
