(54) Title: SYSTEMS AND METHODS OF FLEXIBILITY ACTIVATING TEMPORARY ATTENDED DELIVERY/PICKUP LOCATIONS

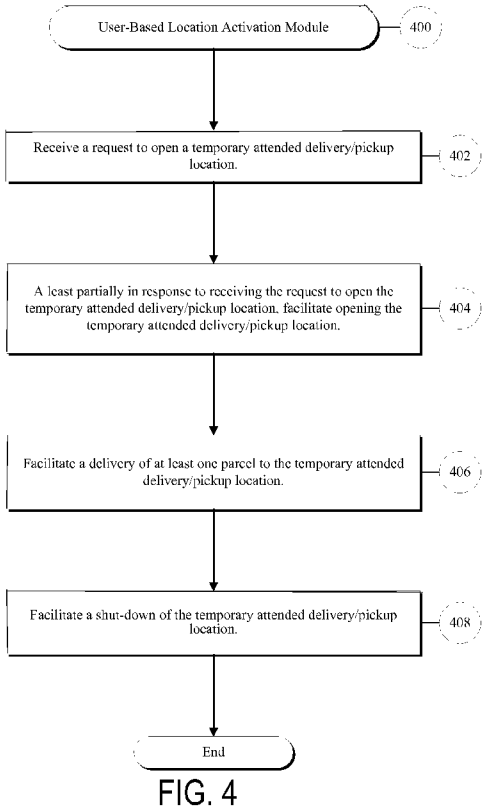

FIG. 4

(57) Abstract: A system and method for activating temporary attended delivery/pickup locations is described. The system receives a desired area for a temporary attended delivery/pickup location (e.g., near a event). The system then receives location information associated with one or more inactive temporary attended delivery/pickup locations. The system, in various embodiments, determines that at least one inactive temporary attended delivery/pickup location is in and/or near the desired area. The system then, in a particular embodiment, notifies a user that the inactive temporary attended delivery/pickup location is in and/or near the desired area. In various embodiments, the system receives a request to activate the temporary attended delivery/pickup location and, at least partially in response to receiving the request, activates the at least one inactive temporary attended delivery/pickup location.
