

SYSTEMS, DEVICES AND METHODS FOR ONLINE TRANSACTION VERIFICATION

ABSTRACT

Systems and methods are provided for online transaction verification. For example, a status of a commodity on flash sale is acquired; a verification code associated with the commodity on flash sale is acquired in response to the commodity on flash sale being purchasable; the verification code is output; an input voice password for flash sale is recorded; the voice password for flash sale is uploaded to a server for voice recognition, where order data is processed by the server in response to the uploaded voice password for flash sale matching with a predetermined verification code and a result related to the order data processing is returned; and the result is received and output.
