

INSERT FOR HIGH STRESS CONNECTION

ABSTRACT

An insert for a high stress connection. The insert has a housing having a generally cylindrical body and a flanged end with a generally cylindrical inner surface that may accommodate a bolt. The insert may have either an end cap or a thinned portion, or both. The end cap may be attached to the flanged end of the housing and sized such that the bolt does not pass through the end cap. The body may have the thinned portion.
