

ABSTRACT

There are provided a styrene-based foamed sheet produced by foaming a styrene-based resin composition using both a styrene-based resin and polylactic acid without impairing the usefulness thereof, and a molded product produced by thermoforming the foamed sheet. Specifically, the present invention provides a styrene-based foamed sheet produced by foaming a styrene-based resin composition containing an impact-resistant styrene-based resin (A), a styrene-acrylic acid ester copolymer (B) having a highbranched structure, and polylactic acid (C), and also provides a molded product produced by thermoforming the styrene-based foamed sheet.
