

Abstract

An information input method and apparatus is provided. The method comprises: obtaining attribute information of a page input box, wherein the page input box is located at a front-end page of a mobile application (101); according to the attribute information, creating a native input box having the attribute information (102), wherein the native input box is created at a native layer; and filling information, input by a user through the native input box, back to the page input box (103), thus finally ensuring that the information is input rapidly and effectively.
