

ABSTRACT

Provided are a scene detection method and apparatus, an electronic device and a computer storage medium. The method includes that: own device running data and scene information collected by a collection device are acquired through an own first detection system component; the device running data and the scene information are made pulled to a cloud for the cloud to detect itself and the collection device; in a case of a detection exception of the cloud, an own first device state is detected according to the device running data, and a second device state of the collection device is detected based on the scene information; and in a case where both the first device state and the second device state are normal, a scene state is detected according to a present frame of scene image in the scene information and a locally stored configuration file to obtain a detection result for use.
