

ACQUIRING APPARATUS AND CONTROL METHOD THEREFOR, AND CONTROL APPARATUS

ABSTRACT

Embodiments of this specification provide an acquiring apparatus and a control method
5 therefor. The acquiring apparatus includes a controller, a first NFC module, and a second NFC
module. The first NFC module and the second NFC module work under control of the controller.
The first NFC module is configured to work in a card reader mode, and is configured to transmit
a first radio frequency signal, detect first response information, and obtain customer payment
information from the first response information. The second NFC module is configured to work
10 in a card emulation mode, and is configured to send second response information including
merchant acquiring information in response to sensing a second radio frequency signal.
