

Abstract

METHOD FOR CONTROLLING INFORMATION APPARATUS AND PROGRAM

A method of the present disclosure causes a computer of an information apparatus to: display a display screen on the display, the display screen representing each of rooms included in a building; display device icons on the display in units of each room represented on the display screen, each of the device icons representing each of the one or more target devices; when a selection of a first device icon representing a first target device among the one or more target devices is sensed, display a room screen on the display, the room screen representing a room corresponding to the selected first device icon, the displayed room screen including a first operation screen for operating the first target device and a second operation screen for operating a second target device, the first target device corresponding to the selected first device icon, the second target device corresponding to a second device icon other than the selected first device icon, the second target device being arranged in a room represented on the room screen; and output to the network a first control command controlling the first target device based on an operation on the first operation screen or a second control command controlling the second target device based on an operation on the second operation screen.
