

ABSTRACT

Embodiments of the present disclosure provide a method and apparatus for backing up information. A specific embodiment of the method includes: acquiring a meta information record table of an information system at an interval of a first time period; sending a first meta information acquiring instruction to a node in at least one node according to the meta information record table; and saving, in response to receiving at least one piece of first feedback information corresponding to the first meta information acquiring instruction and sent by the node in the at least one node, the at least one piece of first feedback information to a first storage area. This embodiment reduces the amount of data backed up and improves the efficiency and stability of the backup of the data.
