(54) **Title:** MULTIFUNCTIONAL USER DEVICE

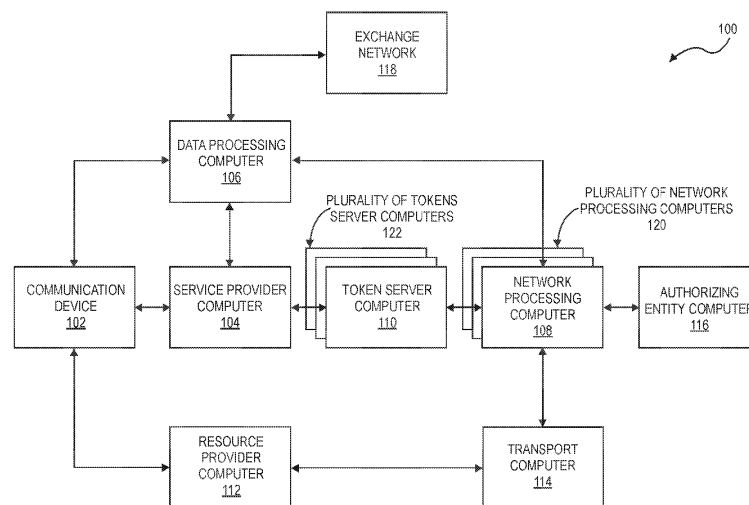

FIG. 1

(57) **Abstract:** A method includes a data processing computer receiving an authorization request message comprising a user device identifier, addition method data, and an amount for an interaction from a network processing computer. The network processing computer determined the user device identifier from a token associated with a first interaction type of a plurality of interaction types associated with a plurality of tokens. The data processing computer can then determine whether or not the user device identifier matches a stored user device identifier. If the user device identifier matches the stored user device identifier, then the data processing computer can further process the interaction using the user device identifier and the addition method data.
