(54) Title: BISPECIFIC ANTI-CD28 X ANTI-CD22 ANTIBODIES AND USES THEREOF

Treatment of NSG Mice Bearing WSU-DLCL2 Tumors with REGN5837 in the Presence of Sub-Efficacious Doses of REGN1979 is Associated with Significantly Greater Survival than REGN5837 or REGN1979 Monotherapy

FIG. 14

(57) Abstract: The present invention provides bispecific antigen-binding molecules comprising a first antigen-binding domain that specifically binds human CD28, and a second antigen-binding molecule that specifically binds human CD-22. In certain embodiments, the bispecific antigen-binding molecules of the present invention are capable of inhibiting the growth of tumors expressing CD-22, such as B-cell lymphomas. The antibodies and bispecific antigen-binding molecules of the invention are useful for the treatment of diseases and disorders in which an up-regulated or induced targeted immune response is desired and/or therapeutically beneficial.
