Immunogenic Anti-Inflammatory Compositions

ABSTRACT

The invention provides methods of formulating an anti-inflammatory composition for treating inflammatory conditions in a speicifc organ or tissue. The method involves selecting at least one pathogen that is pathogenic in the specific organ or tissue; producing an antigenic composition comprising antigenic determinants that together are specific for the pathogen; and formulating the antigenic composition for administration as an anti-inflammatory composition capable of eliciting an anti-inflammatory response in the specific organ or tissue, wherein the condition characterized by inflammation is not a cancer. In embodiments of the invention, a cancer is situated in the specific organ or tissue.
