

MONOSTATIC SENSING METHOD AND RELATED PRODUCT

ABSTRACT

Embodiments of this application disclose a monostatic sensing method and a related product. The method includes: performing monostatic sensing based on a first frame structure, to obtain a first sensing result; receiving a first request frame sent by a second device, where the first request frame is used to request to obtain a monostatic sensing result; sending a first response frame to the second device based on the first request frame, where the first response frame includes the first sensing result. This application is implemented, so that the monostatic sensing result of the device can be fully used.
