(54) Title: WIRED AND WIRELESS SWITCHING FOR HEAD-MOUNTED DEVICE

FIG. 1

(57) Abstract: In an embodiment, a head mounted device (HMD) is configured to receive streamed virtual reality or augmented reality (VR/AR) data through a first connection and a second connection. The streamed VR/AR data is controlled by a controller that transmits first streamed VR/AR data from a data source to the HMD via the first connection and transmits second streamed VR/AR data from the data source to the HMD via the second connection such that the HMD receives a continuous stream of VR/AR data when the data source switches from transmitting the first streamed VR/AR data to transmitting the second streamed VR/AR data.
