

ABSTRACT

The present invention provides a new means for treating a blood cancer by 1) a two-drug combination of a DNA methyltransferase inhibitor and a pharmaceutical composition containing a compound (I):

(I)

or a pharmaceutically acceptable salt or hydrate thereof as an active ingredient, and 2) a three-drug combination of a DNA methyltransferase inhibitor, a BCL-2 inhibitor, and a pharmaceutical composition containing a compound (I) or a pharmaceutically acceptable salt or hydrate thereof as an active ingredient.
