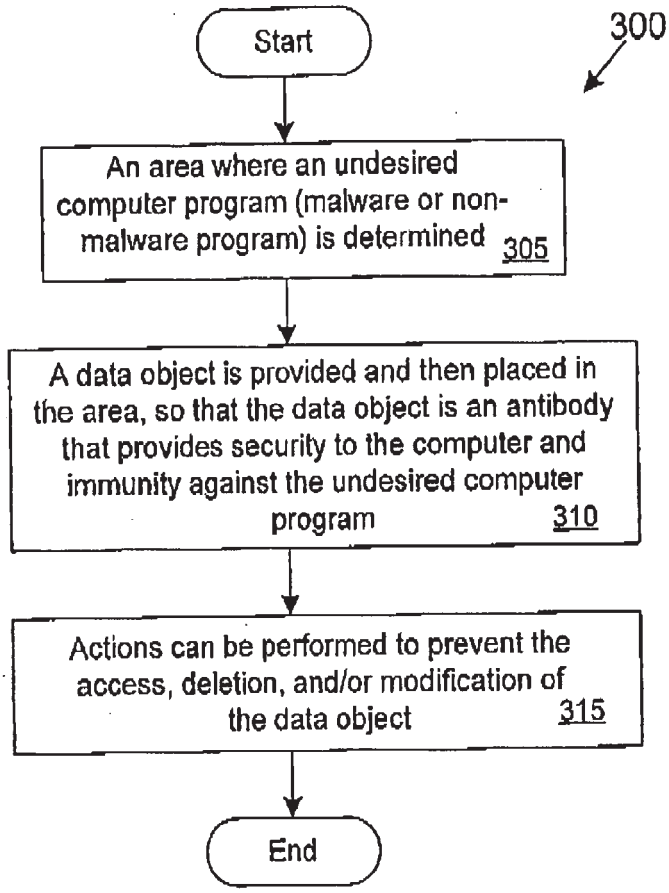
FIGURE 2



Start
300
An area where an undesired computer program (malware or non-malware program) is determined 305
A data object is provided and then placed in the area, so that the data object is an antibody that provides security to the computer and immunity against the undesired computer program 310
Actions can be performed to prevent the access, deletion, and/or modification of the data object 315
End
