

PERSONAL STORAGE UNIT WITH REMOTE ACCESS CONTROL

Abstract

The present invention provides a system, method and apparatus for controlling access to a personal storage unit having one or more lockable compartments, an electronical control door latch for locking the door of each compartment and a central control unit. The central control unit is in communication with the door latches and adapted to receive unlock instructions from a remote controller and generate unlock signals to the relevant door latch based on the unlock instructions. The remote controller may be a web enabled device that accesses a web-based application which initiates the web enabled device to generate an unlock instruction upon valid input by an end user.
