

Sidelink Information Reporting Method and Apparatus, and Terminal and Readable Storage Medium

Abstract

5 The present invention provides an information reporting method and apparatus, and a terminal and a readable storage medium. The method comprises: a sending end obtains a period of transmission resources configured and authorized by a network; transmit a transmission block to a receiving end based on the transmission resources, the transmission resources being used for transmitting a same transmission block or a plurality of different transmission blocks; report a preset information quantity of report information to the network according to a
10 transmission status and/or a feedback status of the receiving end. According to the present invention, the sending end can transmit sidelink data to the receiving end based on the obtained transmission resources, and the same transmission block or a plurality of different transmission blocks can be transmitted in each period, which enriches the transmission mode; in this period, the sending end can also report a fixed information quantity of information according to the
15 actual transmission status and/or the feedback status of the receiving end, which improves the information reporting process under transmission resources, facilitating improving integrity and stability of sidelink transmission.
