

ABSTRACT

The present application relates to a substituted piperidine carboxamide azaindane derivative, a method for preparing same, and use of a pharmaceutical composition containing the derivative or a deuterated derivative in medicine. Specifically, the present application relates to a substituted piperidine carboxamide azaindane derivative represented by general formula (I), a method for preparing same, a pharmaceutically acceptable salt thereof, and use thereof as a CGRP receptor antagonist in preventing and/or treating CGRP-related diseases, in particular the field of migraine. The definition of each substituent in general formula (I) is the same as that in the specification.
