

METHOD FOR GENERATING BUG IDENTIFICATION IMAGE DATA, AND BUG IDENTIFICATION SYSTEM

ABSTRACT

A method for generating bug identification image data according to the present invention is a method for generating bug identification image data in which pre-processing image data with an image of a bug is processed to generate the bug identification image data, and the method includes: a bug extracting step of extracting bug data on the bug from pre-processing image data; a point information imparting step of imparting point information data to at least three points designated from among the extracted bug data; and a sequence information imparting step of imparting sequence information on an order to the point information data at the at least three points designated in the point information imparting step.
