

INFORMATION PROVIDING APPARATUS, INFORMATION PROVIDING METHOD,
AND PROGRAM
ABSTRACT

To provide a sufficient amount of information and increase a degree of satisfaction of a user in a technique for providing information specified for a community. According to the present invention, an information providing apparatus 10 including a post-information acquisition unit 11 that acquires post information including a post content posted on the Internet and position information, a sensor-information acquisition unit 12 that acquires sensor information including data generated by a sensor and installation position information of the sensor, a section-information generation unit 13 that generates, based on the post information and the sensor information, section information relating to each of a plurality of observation sections, and an output unit 14 that outputs the section information, is provided.
