(54) Title: MIRROR ILLUSION SYSTEMS AND METHODS

FIG. 1

(57) Abstract: A show effect system may include a first mirror coupled to a first actuator and mounted to a wall, a second mirror coupled to a second actuator and mounted to the wall adjacent to the first mirror, and a sensor configured to monitor a viewing area for observing the first mirror and the second mirror, wherein the sensor is configured provide sensor data related to a guest within the viewing area. The show effect system may also include a controller communicatively coupled to the first actuator, the second actuator, and the sensor. The controller may determine the guest is in a location within the viewing area based on the sensor data and instruct the first actuator to adjust a position or an orientation of the first mirror to remove the location from a reflection of the first mirror.
