APPARATUS, AND ASSOCIATED METHOD, FOR SETTING THE NUMBER OF PAGE INDICATIONS PER PAGE TO BE INCLUDED IN A QUICK PAGE MESSAGE

ABSTRACT

Apparatus, and an associated method, for paging an access terminal in a radio communication system. A page indication count setter selects the page indication count, i.e., the number of page indications per page, to be included in a quick page message. The set page indication count is dependent upon communication activity, e.g., the system paging load, identified by a communication activity input indicia identifier.
