(54) Title: TRANSACTION ACCOUNTING PAYMENT AND CLASSIFICATION SYSTEM AND APPROACH

(57) Abstract: Accounting data is classified to facilitate transaction processing and management. According to an example embodiment, data based rules are implemented for classifying transaction-related data into accounting categories. Accounting information is processed as a function of the data based rules and accordingly automatically classified. This approach involves, for example, the identification of particular data based rules to apply to the accounting information, applying the rules and processing the information accordingly.
