Abstract

Handover Control Method, and Network-Side Device and System

Embodiments of the present invention disclose a handover control method, a network-side device, and a system. The method includes: sending, by a first network-side device, a first handover request to a second network-side device, wherein the first network-side device is applied to a first network, and the second network-side device is applied to a second network, and a terminal is attached to the first network, and the first handover request contains first terminal information of the terminal, and the first terminal information is used for configuring a resource prepared for handover for the terminal to hand over to the second network when the second network-side device determines that the first terminal information meets a predetermined condition for initiating a handover operation. The embodiments of the present invention are beneficial to improving utilization efficiency of resources of a candidate network.
