Abstract

PROCESSING DEVICE, INCENTIVE PROCESSING METHOD, INCENTIVE PROCESSING SYSTEM, AND COMPUTER PROGRAM THEREFOR

Provided is a technique that makes it possible to perform a process of making payment with an incentive provided to a worker by a company when the worker makes consumption designated by the company. An incentive processing device 1 of the present invention obtains worker IDs and pieces of incentive information indicating the values of incentives provided to workers from a personnel attendance salary calculation device 3, and registers the pieces of incentive information in association with the respective worker IDs in an incentive balance information DB 24. Then, the incentive processing device 1 obtains consumption information containing worker information, to-be-consumed money information, and a consumption destination ID from a payment terminal 2 and determines whether a consumption destination identified based on the consumption destination ID satisfies a consumption condition designated by a company. If determining that the consumption condition is satisfied, the incentive processing device 1 subtracts the to-be-consumed money information from the corresponding incentive information registered in the incentive balance information DB to thereby calculate the balance, and registers this balance in association with the worker ID in the incentive balance information DB.
