

[ABSTRACT]

TRAFFIC INFORMATION PROCESSING DEVICE, PROCESSING METHOD FOR
THE SAME, AND PROGRAM

5

A traffic processing device calculates a current position of a vehicle, determines whether the vehicle has passed a transit point, and determines whether the transit point is a defined point or an undefined point. When the vehicle is determined to have passed through the defined point, the traffic processing device outputs passage information

10 indicating the passage of the vehicle through the transit point to a display unit.
