ABSTRACT

POSITIONING DEVICE, HOLDING DEVICE AND EXHIBITING DEVICE

[TITLE OF DOCUMENT]

[ABSTRACT]

[OBJECT] To alleviate the work of constructing an altar at the place of a ceremony when a lot of flowers are used to decorate the altar by means of constituting the altar with multiple modules.

[SOLVING MEANS] The figure shows the construction of a module. A shaft 4 is mounted via a mounting member 6 at a desired place on the top surface of a stand consisting of frames 10, and a pole 3 is erected via a slider 5 at a desired place of the corresponding shaft. A base is mounted on top of the pole and a desired number of flowers are planted on the corresponding base. An appropriate number of shafts and poles are provided on the module corresponding to the distribution of flowers to constitute the altar. The shafts and poles have multiple detent holes along their lengthwise directions so that the position of a slider on a shaft and the height of a pole are adjusted and maintained by the detent engagement mechanisms provided in the slider.
