METHOD FOR CREATING DATA FILE

ABSTRACT:

A function for creating a new file by editing and synthesizing one or more data files such as pictures, movies, and music, is very promising function and provides a new possibility to the portable electronic devices. However, in the existing technology, the user may be bothered with selecting items for a new data file from a lot of items stored in the portable electronic device. In this patent application, an invention that may be used for easy-selection of items in such cases will be disclosed.
