

Abstract**FILTER RENEWAL SYSTEM AND A METHOD THEREOF**

- 5 An apparatus and a method of rejuvenating capillary filters 2 using both gas agitation of the liquid about the surface of capillary filters 2 and backflushing the capillary filters 2 is disclosed. The gas agitation loosens residue on the surface of the capillary filters 2 and the backflush further loosens residue in an inside-out direction through the walls of capillary filters 2. The agitation of the liquid aids in dispersion, suspensions and
- 10 transportation of the releases residue form the capillary filters 2.
