(54) Title: A PORTABLE SYSTEM AND METHOD FOR REMOTELY ACCESSING DATA

Figure 3B

(57) Abstract: Embodiments of the present invention provide a portable system and method for accessing data remotely. The system and method include a first module and a second module, each of the modules being associated with the host system, wherein the first module is capable of being connected to the host system and the second module, and the second module is capable of being connected to the remote system to establish a secure communication channel between the first and second modules across the data link to access the data.
