(54) Title: CONFIGURABLE DATA CONTAINER FOR FRAUD DETECTION SYSTEM

FIG. 1

(57) Abstract: Systems, methods, and non-transitory computer readable media for generating a configurable data container that includes a first data field, exporting the configurable data container for use by a client-side device, receiving a modification to the configurable data container, automatically binding the second data field to a second data path for retrieval of a second data value to be used in a second fraud detection rule, generating an updated configurable data container, and exporting the updated configurable data container for use by the client-side device. The first data field corresponds to a first data path for retrieval of a first data value to be used in a first fraud detection rule. The configurable data container includes a server-side schema and a client-side schema. Each of the server-side schema and the client-side schema is configured to validate a first input data value corresponding to the first data field.
