(54) Title: APPARATUS AND METHOD FOR ASSEMBLING ELECTROCHROMIC CELLS

(57) Abstract

Apparatus and methods for manufacturing electrochromic cells. Layers of various inks are printed on substrates by high speed printing means. The electrochromic cells comprise layers of electrode (26), electrolyte (28), and counter electrode (30) ink materials which are printed on at least one substrate (54). When an electrical voltage differential is introduced between the electrode and counter electrode layers, an electrochemical reaction occurs in the electrochemical cell.
