(54) Title: MANUALLY ACTUATABLE LIQUID DISPENSING RAZOR

(57) Abstract: The invention features a razor for dispensing a fluid during shaving. The razor includes a handle, a razor cartridge, and a fluid dispensing member joined to the cartridge. The handle includes a cavity for housing a fluid and a manually-actuated pump to displace the fluid from the cavity through a connector port flowpath to an opening at the proximal end of the handle. The razor cartridge includes a cartridge connecting structure attached to the housing and an aperture that extends from the rear surface to the front surface of the housing. The fluid dispensing member is disposed in the cartridge connecting structure and includes a converging flowpath that is in fluid communication with the connector port flowpath and the aperture in the housing.
