

ABSTRACT

Embodiments of the present disclosure relate to a method and an apparatus for image processing, an electronic device and a storage medium. The method includes: obtaining a target region image in an image to be identified, the target region image comprising at least one target object; determining a state of each of the at least one target object based on the target region image, where the state includes an opened-eye state and a closed-eye state; and determining an identity authentication result based at least part on the state of each of the at least one target object.
