Claims

1. A bed apparatus including, at least, two drivers or a first driver and a second driver, the first driver being in linkage with the second driver, comprising:

a calculating means for calculating a calculated bed state value, based on the first driver and the second driver;

an error detecting means for detecting error between the calculated bed state value and a designated bed state value which stored beforehand, or, which can be designated by the user; and,

an error correcting means for correcting the detected error when an error is detected by the error detecting means.
